The key equation:

$$\min_x \|X\|_* + \frac{\alpha}{2} \|P_\Omega(X) - P_\Omega(T)\|_F^2$$

$$s.t. 0 < X_{ij} < 1 (0 \leq i, j \leq n + m)$$

Use ADMM to solve key equation:

$$W^* = \begin{bmatrix} S_1^* & A^* \\ (A^*)^T & S_p^* \end{bmatrix}$$
